

## ABSTRACT OF THE DISCLOSURE

Cleaning media based on liquid CO<sub>2</sub> and including from 0.01 to 5 % by weight of the formulation of a cleaning additive which is at least one C<sub>6</sub> to C<sub>24</sub> hydrocarbyl ester of a multi-carboxylic acid can be used in dry cleaning of textiles. Desirable cleaning additives are of the formula (I):  $R^1(CO_2R^2)_n$  where R<sup>1</sup> is the residue of a C<sub>1</sub> to C<sub>10</sub> hydrocarbyl group from which n hydrogen atoms have been removed, R<sup>2</sup> is a C<sub>6</sub> to C<sub>24</sub> hydrocarbyl, particularly alkyl or alkenyl, group; and n is from 2 to 5; particularly C<sub>12</sub> to C<sub>18</sub> adipate esters.
